

Single Source of Truth: Product Foundation Document

1. What is Obesity Killer Kit?

Obesity Killer Kit is a doctor-formulated Ayurvedic weight-loss system designed for overweight and obese adults who want to lose weight in a safe, natural, and practical way. It is built for people who want fast visible results without relying on injections, crash diets, hard-to-sustain gym routines, or extreme lifestyle changes that are difficult to maintain. Rather than being a standalone supplement, it is designed as a structured, guided system that makes weight loss easier to follow in real life.

At its core, Obesity Killer Kit offers a simple promise: **lose 3 to 5 kg in 15 days** through a natural, easy-to-follow process that does not leave the user feeling hungry, weak, or overwhelmed. The product is built around five core ideas: fast results, an Ayurvedic and all-natural formulation, no side effects, ease of following, and long-term sustainability.

2. What problem does it solve?

The product is built for a common failure pattern in weight loss. Many people do not fail because they lack intent. They fail because most methods create too much friction. Strict diets create hunger. Meal replacements feel unnatural. Intense workout plans are hard to maintain. Injections are scary. Medication creates dependency. Stimulant-style products can feel unsustainable. The result is a cycle of effort, inconsistency, disappointment, and quitting. Also,

Weight gain is also not always driven only by eating habits or lifestyle choices. For many people, it is influenced by factors outside their direct control, such as genetics, hormonal imbalance, medications, and chronic health conditions. These situations often make weight loss slower, more frustrating, and harder to sustain with standard advice alone.

Obesity Killer Kit is built to solve these friction points. It is designed for people who want to lose weight without feeling hungry, weak, confused, or forced into an unrealistic routine. It is also relevant for people whose weight-loss journey is made harder by underlying biological or medical factors, because it aims to make the process easier to follow, more manageable, and more sustainable in real life.

3. What is the customer really hiring this product to do?

At a surface level, the customer is hiring Obesity Killer Kit to lose weight.

At a deeper level, the customer is hiring it to help them lose weight in a way that feels fast, safe, believable, and easy enough to sustain in real life. They are not just buying a lower number on the weighing scale. They are buying relief from hunger, cravings, inconsistency, confusion, and the frustration of methods that become too hard to follow after a few days.

The real job of the product is to reduce the day-to-day friction of weight loss. It helps the customer stay in a caloric deficit more consistently, feel more in control, and follow a structured path without relying on injections, crash diets, or high-effort routines that do not fit ordinary life.

For many users, the product is also being hired to solve a harder version of the problem: “I want to lose weight even though my body or health situation makes it more difficult than usual.” This includes people dealing with hormonal issues, chronic conditions, or ongoing medications that may make weight loss slower, more frustrating, or less predictable. In that sense, the product is not only about fat loss. It is about making weight loss feel more possible for people who often feel stuck despite sincere effort. The official product FAQ also presents the kit as usable in conditions such as hypothyroidism, BP, PCOD/PCOS, and high cholesterol, while keeping defined exclusions such as pregnancy, recent postpartum period, and active insulin use.

The product is also being hired to solve a practical decision problem. Many users do not just want a formula. They want a system that removes guesswork, gives them a clear routine, and supports them through the process. In that sense, Obesity Killer Kit is not just a weight-loss product. It is a guided system that makes the journey feel more manageable and more achievable.

TL;DR

The customer is hiring Obesity Killer Kit to help them lose weight through a system that feels fast, safe, structured, and easy enough to sustain in real life, especially when hunger, cravings, inconsistency, or underlying health factors make weight loss harder than usual.

4. Who is it for?

TL;DR

Obesity Killer Kit is designed for overweight and obese adults with a BMI above 25 who want fast, natural, easy-to-follow weight loss, especially if they struggle with cravings, inconsistency, or weight loss made harder by hormonal conditions, chronic health issues, genetics, or ongoing medication use.

Full version

Obesity Killer Kit is designed for overweight and obese adults with a BMI above 25 who want to lose weight in a way that feels natural, practical, and manageable in real life. It is meant for people who want fast visible results without relying on injections, crash diets, extreme workout routines, or methods that become too difficult to sustain after a few days.

It is especially relevant for adults who struggle with stubborn fat, belly fat, cravings, emotional eating, low energy, slow progress, or repeated failure with diets, gym plans, or other weight-loss products. It is also relevant for people who want a structured and guided system rather than a product they have to figure out on their own.

The kit is particularly useful for people whose weight-loss journey is harder than usual because of factors outside their full control. This includes people dealing with hormonal conditions, chronic health issues, genetic tendency toward weight gain, or ongoing medications that may make weight loss slower, more frustrating, or less predictable.

It is often considered by adults dealing with conditions such as PCOD, PCOS, thyroid imbalance, high blood pressure, fatty liver, diabetes, and IBS, provided they do not fall into the defined exclusion categories.

It is also a strong fit for adults who are actively looking for a natural or Ayurvedic weight-loss option, or who are hesitant about other methods because of safety, side-effect, or dependency concerns.

In practical terms, the product is for adults who want a weight-loss system that feels safe, believable, and easy enough to follow consistently, while still delivering visible results.

5. Who is it not for?

The product should not be taken by:

- pregnant women
- women within 6 months postpartum
- people actively taking insulin

The user's final internal guidance also adds caution for people on multiple psychiatric medications and people who have undergone multiple surgeries. Those cases should be treated as doctor-review situations before use. The final document should not state that the product is for users below 18 years of age.

6. What comes in the kit?

Obesity Killer Kit is a physical boxed course built around three main formulation components plus support material and tracking tools. The live product page also sells it in 15-day, 30-day, and 2 x 30-day partner variants, while your internal usage language refers to 15-day, 30-day, and 60-day buying options. The standardized pricing you confirmed is ₹5,800 for 15 days, ₹10,000 for 30 days, and ₹17,000 for 60 days.

OK Liquid

OK Liquid is the core part of the system. It comes as 15 pre-measured pouches in a 15-day kit, one for each day. Its role is to reduce hunger, increase satiety, help the user eat less without feeling weak, and support the body with nutrition during the process. You confirmed that the OK Liquid provides **350 to 400 kcal of nutrition**. It is taken every morning on an empty stomach after warming the pouch in hot water. No solid food should be consumed for the next 4 hours, though zero-calorie drinks such as tea, coffee, lemon water, lemon tea, and jeera water can be taken.

OK Tablet

OK Tablet is taken at night, 15 minutes before bed. It is positioned as digestive support that helps with bloating, acidity, and gas. It can also continue to be used after the main course as part of gut health support.

OK Powder

OK Powder is taken at night, 15 minutes before bed, followed by warm water. It supports digestion, nutrient absorption, and waste excretion. Like the tablet, it can continue to play a role beyond the main course.

Dried Amla

Dried amla is taken after the liquid. It acts as a natural mouth freshener, helps with taste balance, and supports digestion.

Daily Tracker

The tracker is a core part of the system, not just an accessory. Users record daily weight, meals, steps, water, and sleep, then share it with the team on WhatsApp. This improves accountability, helps the support team guide the user using real data, and is part of refund eligibility.

Guide and support

The kit includes an information booklet, a list of allowed and not allowed foods, and a **7-day suggested diet plan** for users who want more step-by-step direction. Users can also choose from allowed foods according to convenience. Dedicated chat support is available to answer questions, keep users on track, and nudge tracker sharing.

7. What is in the formulation?

The formulation has been updated. The current internal standard is:

- **31 unique ingredients**
- **44 total ingredient entries across the kit**
- **20 in OK Liquid**
- **12 in OK Powder**
- **12 in OK Tablet**

There are **no synthetic ingredients** and **no chemical preservatives** anywhere in the kit. This is one of the most important truths the brand wants to own. The live site still uses an older public number for herbs, so the internal training version should use the updated formulation count above.

TLDR

The formulation is built from 31 unique ingredients, appearing in 44 total entries across OK Liquid, OK Powder, and OK Tablet. These ingredients work across appetite support, digestion, metabolism, fat mobilization, detoxification, gut cleanup, water-balance support, and overall metabolic balance. There are no synthetic ingredients and no chemical preservatives in the kit.

Full version

The formulation of Obesity Killer Kit is built from **31 unique ingredients**, appearing in **44 total ingredient entries** across the three product components: **OK Liquid, OK Powder, and OK Tablet**. Some ingredients are used in more than one component, which is why the total formulation count is higher than the number of unique ingredients. There are **no synthetic ingredients** and **no chemical preservatives** in the kit.

The formulation is designed as a multi-action Ayurvedic system rather than a one-dimensional weight-loss blend. Across the three components, the ingredients collectively support several functions that are central to the brand's product logic.

The first major function is **digestive fire and metabolic activation**. Ingredients such as **Chitrak, Ginger, Black Pepper, Long Pepper, Cumin, Kala Jeera, Nagar Motha, Chavya, and Pippali Mula** are described as supporting digestion, improving Agni, enhancing metabolism, or improving bioavailability and absorption.

The second major function is **fat mobilization and tissue scraping**. Ingredients such as **Guggulu, Chitrak, Black Pepper, Haritaki, Sajji Kshar, and Long Pepper** are associated with scraping accumulated fat, clearing channels, reducing tissue heaviness, or improving fat metabolism.

The third major function is **detoxification, gut cleanup, and elimination support**. Ingredients such as **Haritaki, Baheda, Vidanga, Sanay, Amla, and Murcchita Sneha** are linked to gut detoxification, bowel regulation, removal of accumulated waste, support for detox, or reduction of Ama.

The fourth major function is **water balance, swelling reduction, and channel clearance**. Ingredients such as **Gokshura, Gambhari, Patala, Arani, Brihati, and Kantakari** are described as supporting diuretic action, reducing swelling, clearing channels, and reducing water retention or metabolic stagnation.

The fifth function is **balancing and strengthening support**, which matters because the brand does not want the formulation to feel like a harsh depletion product. Ingredients such as **Amla, Shalaparni, and Prishnaparni** are described in ways that suggest balancing, strengthening, tissue support, and broader metabolic stability.

Taken together, the formulation supports the brand's broader system logic: the kit is not designed only to reduce intake, but also to support digestion, metabolic function, detoxification, internal balance, and the body's ability to process food and stored fat more effectively over the course.

8. How does it work?

Obesity Killer Kit is designed as a multi-action Ayurvedic weight-loss system, not a single-function product. Its three components work together to support weight loss through complementary mechanisms rather than relying on just one lever.

The OK Liquid primarily helps on the intake side. It reduces hunger and cravings, improves satiety, and makes it easier for the user to maintain a caloric deficit without feeling weak or depleted. This is important because most weight-loss plans fail not in theory, but in day-to-day adherence. By making lower intake easier to sustain, the OK Liquid helps turn caloric deficit from a struggle into a more manageable routine.

The OK Tablet and OK Powder work on the body's processing side. They are designed to support digestion, gut comfort, and metabolic function during the course. By helping reduce issues such as bloating, acidity, gas, constipation, and heaviness, they improve digestive efficiency and support a lighter, more comfortable physiological state. This matters because better digestive function often improves compliance, energy, and overall ease of following the program.

Taken together, the system works on both sides of the equation. The OK Liquid helps reduce calorie intake. The OK Tablet and OK Powder support the body's ability to digest, metabolize, and eliminate more effectively. So the kit is not positioned merely as an appetite-control product, but as a more holistic weight-loss system that supports both lower intake and better internal functioning.

From an Ayurvedic perspective, the kit is designed to support pachakagni and dhatvagni, reduce the accumulation of aam, and promote detoxification. In practical terms, this means the course is intended not only to support fat loss, but also to help the body feel lighter, cleaner, and more balanced over time. This is why Obesity Killer Kit is positioned as more than a short-term weight-loss intervention. It is designed as a structured Ayurvedic system that supports fast visible results while remaining natural, practical, and sustainable.

9. What benefits do users see?

What Benefits Do Users See?

Section ID: [BENEFITS_USERS_SEE](#)

TLDR

Obesity Killer Kit helps users lose 3 to 5 kg in 15 days while also making the process feel safer, simpler, and easier to follow through reduced hunger, no side effects,

homemade-food compatibility, guided support, and a structured routine with less guesswork.

Benefit Hierarchy

BEN-1 Core Outcome Benefit

Fast visible weight loss

This is the primary benefit users seek. When followed properly, the kit is designed to help users lose **3 to 5 kg in 15 days**.

BEN-2 Core Physical Benefits

Benefits that directly support weight loss

These are the main body-level benefits users experience during the course:

- reduced hunger
 - fewer cravings
 - easier caloric deficit
 - less weakness while eating less
 - sustained energy
 - better digestion
 - support for metabolism
 - improved gut comfort
-

BEN-3 Safety and Trust Benefit

Weight loss without side effects

A major benefit users see in this product is that it is positioned as a natural Ayurvedic course with **no side effects**. This is not just a trust claim. It is also a real user benefit because many people want weight loss but do not want to pay for it through side effects, dependency, or a harsh experience.

BEN-4 Practical Lifestyle Benefits

Benefits that make the course easier to live with

These are some of the most important real-life benefits of the kit:

- no separate meal prep required
- users can eat regular homemade food
- they do not need to cook a separate meal for themselves
- they can eat what is made for the family, within the food guidelines
- this saves time and reduces friction in daily life
- this is especially valuable in households where meal preparation falls on women

This benefit matters because many weight-loss plans fail not only from hunger, but from being too disruptive to normal family life.

BEN-5 Simplicity and No-Guesswork Benefits

Benefits that reduce mental load

The course is structured in a way that reduces confusion and decision fatigue.

- pouch 1 on day 1, pouch 2 on day 2, and so on
- clear daily routine
- “eat only when hungry” rule
- food guidance already defined
- less guesswork about what to do each day
- easier compliance because the process feels clear

This is an important benefit because many users do not just need a product. They need a system that tells them what to do.

BEN-6 Guided Support Benefits

Benefits that come from human guidance

Users do not go through the course alone. They have access to trained coaches who guide them toward their goals.

This support helps with:

- progress tracking
- adherence
- motivation
- clarification of doubts
- keeping the user on track
- making the journey feel more manageable

This is a meaningful benefit because it turns the kit from a self-use product into a guided system.

BEN-7 Experiential and Emotional Benefits

How users may feel during the course

These are not the main promise, but they are still important parts of the experience:

- feeling lighter
 - feeling more in control of eating
 - feeling less overwhelmed
 - feeling more capable of succeeding
 - greater belief that weight loss is possible
 - reduced frustration because the process feels manageable
-

BEN-8 Secondary Benefits

Important, but lower in hierarchy

These benefits support the experience, but should not lead the section:

- less bloating
 - less acidity
 - less gas
 - less constipation
 - less heaviness
 - support for detoxification
 - cleaner and more balanced internal feeling
-

BEN-9 Lower-Priority / Selective Benefits

Can remain in the master document, but should be used selectively

- improved sense of lightness and nimbleness
 - some users may notice improved overall well-being
 - some users may report better skin or hair texture during the course
-

Full Explanation

The main benefit users seek from Obesity Killer Kit is **fast visible weight loss**, with the product designed to help users lose **3 to 5 kg in 15 days** when followed properly.

This primary outcome is supported by several other benefits that make the journey easier and more sustainable. The OK Liquid helps reduce hunger and cravings, making it easier to eat less without feeling weak. The OK Tablet and OK Powder support digestion, gut comfort, and metabolic function, helping reduce issues such as bloating, acidity, gas, constipation, and heaviness.

A major benefit of the kit is that it is positioned as a natural Ayurvedic solution with **no side effects**. For many users, this is not only a trust factor but also a practical benefit, because they want visible weight loss without the fear of harsh trade-offs.

The course also offers important lifestyle benefits. Users do not need to follow a complicated meal-prep routine or cook separately for themselves. They can follow the course using regular homemade food within the allowed food guidance. This reduces disruption to family life and saves time, especially in households where women are responsible for cooking.

Another important benefit is the reduction of guesswork. The structured nature of the course, daily pouch progression, food rules, and built-in routine make it easier for users to know what to do each day. This lowers decision fatigue and improves adherence.

Users also benefit from access to trained coaches who guide them during the journey. This makes the experience feel more supported, more manageable, and less overwhelming than trying to lose weight alone.

Taken together, the benefits of Obesity Killer Kit are not limited to lower body weight alone. The product is designed to help users lose weight quickly while also making the journey feel safer, simpler, more supported, and easier to sustain in real life.

AI Reference Notes

- BEN-1 = fast visible weight loss
 - BEN-2 = core physical and adherence-supporting benefits
 - BEN-3 = no side effects / safe-feeling benefit
 - BEN-4 = homemade-food compatibility / no separate meal prep
 - BEN-5 = reduced guesswork / structured routine
 - BEN-6 = trained coach support
 - BEN-7 = emotional and experiential benefits
 - BEN-8 = secondary digestive and detox-related benefits
 - BEN-9 = lower-priority selective benefits
-

Interpretation Rules for AI / Team Use

1. Lead with BEN-1 in most product explanations.
2. Use BEN-3 when the user is worried about safety or side effects.
3. Use BEN-4 when the user is worried about meal prep, family food, or time burden.
4. Use BEN-5 when the user feels confused or overwhelmed by weight-loss plans.
5. Use BEN-6 when the user needs reassurance that support is available.
6. Use BEN-8 and BEN-9 as supporting benefits, not as the main promise.
7. Do not let secondary benefits overshadow the main product promise of **fast visible weight loss with a safer, easier, more guided experience**.

10. What makes it different?

Section ID: WHAT_MAKES_IT_DIFFERENT

TLDR

Obesity Killer Kit is different because it combines **fast visible results, no side effects, an all-natural Ayurvedic formulation, ease of following, and long-term sustainability in one guided system**. It works with regular homemade food, reduces guesswork, supports harder weight-loss situations like PCOD or menopause-related weight gain, and does not create dependency.

Core Differentiator

The single most important differentiator is this: **Obesity Killer Kit offers fast visible weight loss through an all-natural Ayurvedic system with no side effects.**

Brand Truths This Product Should Own

- all-natural and Ayurvedic
- no side effects
- fast results
- long-term sustainability
- easy to follow

Full Answer

Obesity Killer Kit is designed to solve one of the biggest trade-offs in the weight-loss category. Most options force people to choose between speed and safety, naturalness and effectiveness, or visible results and long-term sustainability. Obesity Killer Kit is positioned to bring these together in one system: **fast results without side effects**, through an all-natural Ayurvedic approach that is practical enough to follow in real life.

Its differentiation is not based on one claim alone. It is earned through how the kit is designed. The OK Liquid helps reduce hunger and cravings, making it easier to maintain a

caloric deficit without weakness. The OK Tablet and OK Powder support digestion, gut comfort, and metabolic function, so the system works not only by reducing intake but also by improving how the body processes food during the course. This makes the kit more holistic than a product that works only as an appetite suppressant or only as a fat-burner.

The product also stands apart because it works with **regular homemade food**. Users do not need a separate meal-prep plan or a separate cooking routine for themselves. They can follow the course within the allowed food guidance while still eating food prepared at home for the family. This makes the process easier to live with, reduces disruption to daily life, and saves time.

Another point of difference is that the course removes **guesswork**. It is not a loose supplement that users take casually and then have to figure out on their own. It is a structured course with a defined routine, day-wise pouch progression, simple food rules, progress tracking, and clear guidance. This reduces decision fatigue and makes it easier to stay consistent.

The kit also includes access to **trained coaches** who guide users toward their goals. This makes the offering different from products that are sold as standalone formulations with no follow-through after purchase. Obesity Killer Kit is designed as a guided system, not just a box of products.

Another important point of difference is that the kit is relevant even for users whose weight-loss journey is harder than usual because of existing conditions. It is positioned as usable in situations such as PCOD, PCOS, thyroid imbalance, high BP, diabetes, fatty liver, IBS, and menopause-related weight gain, provided the user falls within the recommended use criteria and not the exclusion categories. This makes the product feel more usable in real-life health situations, not just for ideal users with uncomplicated weight-loss journeys.

Long-term sustainability is another important point of difference, and in this product it has a specific meaning. First, the kit can be continued in cycles until the user reaches their target weight or a BMI of 25, with a 7 to 10 day break after every 30 days. This makes it sustainable as a practical weight-loss path, not just a one-time short course. Second, the kit is not designed to create dependency. Once the desired result is achieved, the user can stop using it and maintain their weight through a balanced diet, activity, and overall caloric balance. Stopping the kit does not by itself cause weight regain. In that sense, the product is positioned as a guided aid for weight loss, not a lifelong dependency product.

In short, Obesity Killer Kit is different because it is designed to offer something people strongly want but rarely believe they can get together: a weight-loss system that is natural, safe, fast, sustainable, easy to follow, guided throughout the journey, and usable even in harder weight-loss situations. That is the core strategic space the brand should aim to own.

AI Reference Notes

- **DIFF-1** = fast visible results without side effects
- **DIFF-2** = all-natural Ayurvedic formulation
- **DIFF-3** = holistic system, not one-function product

- DIFF-4 = works with regular homemade food
- DIFF-5 = no separate meal prep required
- DIFF-6 = structured course with low guesswork
- DIFF-7 = trained coach guidance
- DIFF-8 = usable in harder weight-loss situations
- DIFF-9 = sustainable during journey
- DIFF-10 = non-dependent after journey

Interpretation Rule

Lead with DIFF-1 and DIFF-2 in most product explanations. Use DIFF-4 to DIFF-7 to explain why the product feels easier to follow in real life. Use DIFF-8 when addressing users with existing conditions. Use DIFF-9 and DIFF-10 when addressing long-term sustainability and dependency concerns.

11. What proof supports belief in the product?

Section ID: PROOF_SUPPORTS_BELIEF

TLDR

Belief in Obesity Killer Kit is primarily built through real customer results, founder credibility, large user base, a clear money-back guarantee, and a guided system supported by tracking and trained coaches.

Proof Hierarchy

PRF-1 Strongest Proof

Real customer results

The strongest proof supporting belief in Obesity Killer Kit is real customer evidence:

- before and after transformations
- customer testimonials
- video testimonials
- specific weight-loss outcomes shared by users

This is the most persuasive proof because it shows visible results in real people, not just claims made by the brand.

PRF-2 Founder and Formulator Credibility

Dr. Arun Tyagi and Arogyam credibility

A second major source of belief is the authority behind the product:

- formulated by Dr. Arun Tyagi
- Ayurvedic doctor with decades of experience
- linked to Arogyam Ayurvedic Panchakarma Hospital and Research Centre
- product is positioned as coming from real treatment experience, not from a generic supplement seller

This matters because the product is not presented as an internet-first trend product. It is presented as a doctor-led system with institutional grounding.

PRF-3 Scale of User Trust

Large number of customers served

Another important proof point is the scale of adoption:

- 70,000+ customers served

This matters because it signals that the product has been used at meaningful scale and is not an untested or niche formulation.

PRF-4 Social Proof Depth

200 video testimonials

The number of video testimonials is itself a strong proof point:

- 200 video testimonials

This matters because video proof feels harder to fake and more believable than generic written reviews.

PRF-5 Result Claim with Risk Reversal

7-day money-back guarantee

The product also supports belief through a defined guarantee:

- if the user does not start losing weight within 7 days, they can request a full refund
- provided they follow the course instructions
- and share the daily tracker so the team can guide them

This matters because it reduces perceived purchase risk and signals confidence from the brand.

PRF-6 Guided System Proof

Tracking and trained coach support

Belief is also supported by how the system is delivered:

- daily tracker
- structured course
- trained coach guidance
- real follow-up during the journey

This matters because it shows that the brand is not only selling a product. It is also supporting adherence and progress.

PRF-7 Product Logic Proof

The formulation and system design feel coherent

Another layer of belief comes from the internal logic of the product:

- OK Liquid reduces hunger and helps calorie control
- OK Tablet and OK Powder support digestion and metabolism
- the course is structured, not random
- it works with regular homemade food
- it is designed as a multi-action system, not a single claim product

This type of proof is weaker than customer results, but it helps the product feel believable and internally coherent.

Full Answer

Belief in Obesity Killer Kit is built through multiple layers of proof, but the strongest proof comes from **real customer results**. Before-and-after transformations, testimonials, and video testimonials make the product feel real because they show that visible weight loss has happened in actual users, not just in brand messaging.

The second major source of belief is **founder credibility**. The product is formulated by Dr. Arun Tyagi and is associated with Arogyam, which gives it a stronger doctor-led and treatment-backed frame than many generic weight-loss products. This helps the product feel more trustworthy and grounded in experience rather than just marketing.

Belief is strengthened further by **scale**. The fact that the kit has served **70,000+ customers** suggests that it has been used widely and repeatedly, which reduces the perception that it is experimental or unproven.

Another important proof layer is the **200 video testimonials**. These are especially powerful because video proof is more vivid and harder to dismiss than standard text reviews. It gives the brand a deep bank of visible social proof.

The **7-day money-back guarantee** adds another important kind of proof: confidence. It signals that the brand is willing to reduce risk for the customer, provided the course is followed correctly and the tracker is shared.

Finally, belief is also supported by how the product is delivered. The structured routine, tracker-based monitoring, and trained coach guidance make the system feel more credible than a product that is simply sold and forgotten after purchase.

In summary, belief in Obesity Killer Kit is not built on one proof point alone. It is built through a combination of **results proof, authority proof, scale proof, guarantee-backed proof, and guided-system proof**.

AI Reference Notes

- PRF-1 = real customer results
 - PRF-2 = founder and Arogyam credibility
 - PRF-3 = 70,000+ customers served
 - PRF-4 = 200 video testimonials
 - PRF-5 = 7-day money-back guarantee
 - PRF-6 = tracker + trained coach support
 - PRF-7 = coherent product and formulation logic
-

Interpretation Rules for AI / Team Use

1. Lead with PRF-1 in most persuasive consumer-facing contexts.
2. Use PRF-2 when the user is asking why they should trust the product.
3. Use PRF-3 and PRF-4 as supporting social proof, not as the first line every time.
4. Use PRF-5 when handling hesitation or purchase-risk objections.
5. Use PRF-6 when the concern is adherence, confusion, or feeling unsupported.

6. Use **PRF-7** when explaining why the product feels logically designed, but do not let it replace real-world proof.

12. What exactly is the money-back guarantee?

If the customer does not start losing weight within 7 days, they can request a full refund. For the guarantee to apply, they must:

1. follow the course as instructed in the course booklet
2. share the daily tracker so the team can guide them

If both conditions are met and the customer still sees no progress, the guarantee is honored.

13. What is the safety position?

The official internal line is: **no side effects**. At the same time, the document should note that the **first 3 days are an adjustment period**. That preserves your chosen brand language while still keeping internal training grounded in actual user experience.

For internal use, it is important to distinguish:

- “no side effects” as the public trust claim
- “first 3 days are an adjustment period” as internal handling guidance

That distinction matters because it helps support teams answer early-course questions consistently.

14. What is the continuation and repeat logic?

- the kit can be continued until the user reaches their target weight or reaches a BMI of 25
- after every 30 days, users should take a break of 7 to 10 days
- the purpose of this break is to help them learn weight maintenance and allow the body to accept the reduced weight as the new normal
- maintenance afterward depends on balanced diet and activity
- stopping the kit does not itself cause regain

You also clarified an important nuance:

- technically, someone can take the course even below a BMI of 25
- but if the goal is weight loss, the course should not be taken below a BMI of 25
- below that point, the weight-loss effect should not be positioned like the first few courses
- other benefits, such as detoxification, may still exist

15. What is the maintenance story after the main course?

Section ID: MAINTENANCE_STORY

TLDR

The weight lost through Obesity Killer Kit is designed to be sustainable and not bounce back on its own, because the course does not rely on superficial methods like dehydration or temporary water loss. The body stays nourished during the course. After the course, users are expected to maintain their weight through BMR-based eating, daily activity, macro prioritization, and the maintenance guidance provided in the booklet. If needed, Arogyam also provides a Maintenance Kit for extra support.

Full Answer

The main maintenance concern after the course is whether the lost weight will come back. The product's position is that the weight loss achieved through Obesity Killer Kit is **sustainable and does not bounce back on its own**, because the course is not based on superficial methods such as dehydration or temporary water depletion. During the course, the body remains hydrated and nutritional needs are supported, which makes the result more stable than weight loss driven by short-term depletion.

After the main course, maintenance depends on following a few core habits consistently. The first is **eating according to BMR**, with a practical guideline of **1200 to 1400 calories for females** and **1400 to 1600 calories for males**. The second is **45 minutes of daily activity**. The third is **macro prioritization**, with food choices structured in this order: **protein first, then fiber, then fats, and then carbs**.

Users should also follow the maintenance instructions provided in the information booklet that comes with the course. These instructions are part of the broader system and help the user transition from the active weight-loss phase to the maintenance phase in a controlled way.

If a user still needs to continue losing weight, the kit can be repeated in cycles until the target weight or a BMI of 25 is reached, with a **7 to 10 day break after every 30 days**. If the user has already reached the desired result but wants extra help maintaining it, **Arogyam also provides a Maintenance Kit** for ongoing support.

In short, the maintenance story is this: the product is not designed to create dependency, and the lost weight is not supposed to return on its own. Long-term maintenance comes from balanced eating, activity, macro discipline, and following the post-course guidance, with optional help from Arogyam's Maintenance Kit where needed.

AI Reference Notes

- **MAIN-1** = weight does not bounce back on its own

- **MAIN-2** = not based on dehydration or water loss
- **MAIN-3** = body stays hydrated and nourished during course
- **MAIN-4** = eat as per BMR
- **MAIN-5** = 45 minutes daily activity
- **MAIN-6** = macro order: protein, fiber, fats, carbs
- **MAIN-7** = follow maintenance booklet instructions
- **MAIN-8** = repeat kit until target weight or BMI 25
- **MAIN-9** = 7 to 10 day break after every 30 days
- **MAIN-10** = Arogyam Maintenance Kit available

Interpretation Rule

Use **MAIN-1** to **MAIN-3** when answering bounce-back concerns. Use **MAIN-4** to **MAIN-7** when explaining how users should maintain results. Use **MAIN-8** and **MAIN-9** when explaining continuation. Use **MAIN-10** when the user wants extra post-course support.

16. Who created the product?

Section ID: **WHO_CREATED_THE_PRODUCT**

TLDR

Obesity Killer Kit was created by Dr. Arun Tyagi, an Ayurvedic practitioner with 34 years of practice. The product came out of decades of obesity-focused work, patient care, and continuous refinement at Arogyam Hospital & Research Center in Jodhpur, founded in 2013.

Full Answer

Obesity Killer Kit was created by **Dr. Arun Tyagi**. He has **34 years of Ayurvedic practice** and built the product through long-term work on obesity with his team at **Arogyam Hospital & Research Center** in Jodhpur.

Dr. Arun Tyagi's work is rooted in the belief that obesity affects much more than appearance. It affects health, movement, confidence, and daily life. His focus became building a weight-loss path that people can actually follow in real life, rooted in Ayurveda and shaped by patient reality. The About Us page also states that Dr. Arun Tyagi had faced obesity himself, which made the problem personal and strengthened his search for a better solution.

Arogyam Hospital & Research Center, founded in **2013**, became the base for this work. This is where years of obesity treatment were tested, refined, and taken deeper through repeated patient learning. The core questions behind the product were practical: why people quit, why they regain weight, what breaks consistency, what helps them stay on track, and

how to make weight loss safer while still making it work. Obesity Killer Kit came out of that process.

The product was also shaped by work outside the hospital. Through **obesity camps, public lectures, and years of fieldwork**, Dr. Arun Tyagi and the Arogyam team stayed close to the real struggles people face during weight loss. Obesity Killer Kit was then built to solve the failures that defeat most people: **hunger, weakness, complexity, and inconsistency**. It was designed for real routines, real families, and real lives.

In simple terms, Obesity Killer Kit was created by Dr. Arun Tyagi through years of obesity-focused Ayurvedic practice, hospital-based refinement, and field-level learning, with the goal of making weight loss safer, simpler, and more practical to follow.

AI Reference Notes

- **CREATOR-1** = created by Dr. Arun Tyagi
- **CREATOR-2** = 34 years of Ayurvedic practice
- **CREATOR-3** = built from decades of obesity-focused patient care
- **CREATOR-4** = developed through Arogyam Hospital & Research Center
- **CREATOR-5** = Arogyam founded in 2013
- **CREATOR-6** = shaped by hospital refinement and real patient patterns
- **CREATOR-7** = strengthened by camps, public lectures, and fieldwork
- **CREATOR-8** = built to solve hunger, weakness, complexity, and inconsistency

Interpretation Rule

Use **CREATOR-1** to **CREATOR-3** when answering who made the product. Use **CREATOR-4** to **CREATOR-7** when explaining why the product has stronger credibility than a generic supplement. Use **CREATOR-8** when connecting the founder story to the product design.

17. What is Arogyam's role in the trust story?

Arogyam is an important part of the product's credibility. Your internal guidance positions the Obesity Killer Kit as associated with Arogyam Hospital in Jodhpur, Rajasthan, and the live site confirms that Dr. Tyagi founded Arogyam Ayurvedic Panchakarma Hospital and Research Centre in 2013 and that it has **40 beds**. The site also describes it as one of the biggest Ayurvedic hospitals in North India.

Your internal truth set also includes that Arogyam is NABH accredited, has RGHS license, and specializes in Panchakarma, obesity, piles, fistula, and joint pain. Since those details were provided by you but were not confirmed on the live page I reviewed, they can remain in the internal version, but I would treat them as "to be externally verified before broad public reuse."

18. What mission sits behind the product?

The mission you want tied to the broader institution is:

Empower individuals to attain optimal health and well-being through Ayurveda and Panchakarma.

At the product level, the underlying worldview is that obesity is not just a cosmetic issue. It is a serious health condition that deserves root-cause treatment, not just temporary suppression. The product therefore sits at the intersection of Ayurveda, obesity care, practical adherence, and long-term metabolic improvement. This is also consistent with how the live product ecosystem presents Dr. Tyagi and Arogyam.

19. What should the brand not say?

These are important exclusions for consistency:

- do not say the product is for users below 18 years of age
- do not make “no separate meal prep” the center of brand positioning, even though it can still be used as an ease-of-following support point
- do not rely on older ingredient counts such as 39 herbs in internal training material, because the formulation count has changed
- Do not ever say that gym and dieting are not the right way to lose weight
- Do not ever demean any other brand. Just showcase how you are better
- Do not say that the product will cure all obesity related conditions. It is a weight loss product despite those conditions. It is not a cure-all
- Do not body shame
- Do not portray obesity as a lack of will power or intent. Acknowledge that it is a disease
